Jonah Q. Hollis

Software Engineer ▪ Frontend Developer

Self-motivated & collaborative full-stack engineer with a passion for frontend technologies. My objective is to deploy effective code that seeks to bridge the gap between business goals and customer needs to create a seamless experience.

Work History--

100Devs

Fullstack Software Engineer ▪ *Jan '22 - Present*

Developed fullstack applications in collaborative environments to serve business needs.

- Collaborate with a team of developers to build modern and responsive web applications using best practices
- Build semantically structured, full stack web applications
- Apply agile methodologies, like SCRUM, for project management
- Incorporate DRY programming methods to create scalable, legible code

Hollis Website Services, LLC.

Founder / Software Engineer ▪ *Aug '22 - Present*

Create & maintain websites & digital presence for small and medium size businesses.

- Designed websites to connect small and medium size businesses with their regional customer base
- Troubleshot and resolved technical issues with previously deployed websites
- Maintained websites to ensure most up to date and stable builds
- Tested website functionality to resolve any pain points for end users
- Built a digital presence of branded social media for clients

Fuccillo Ready Mix, LLC.

General / IT Manager ▪ *Jul '18 - Aug '22*

Design, develop, and maintain manual and technical company-wide operations.

- Increased production by over 25% or revenue by $1.5 million annually by developing efficiency in systems paired with software deployment
- Implemented various technological upgrades to plant and fleet to streamline operations and increase customer satisfaction
- Automated everyday administrative tasks for a savings of over $100,000 annually
- Established, generated, and monitored digital presence and social media marketing strategies

Education--

University of Massachusetts, Amherst

STEM, B.Sc. Environmental Science ▪ *Sept '14 - Jun '19*

Projects--

Toxin-Finder App: A full stack web app that accesses the EPA database via a public API to display zip-code specific companies using or producing toxins nearby
